## AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## LISTING OF CLAIMS:

Claim 1 (cancelled)

2. (currently amended) A clip according to claim 1A clip for connecting a member to a body, comprising:

a pin with a head and a shank extending longitudinally from the head, the head extending laterally from the shank to an outer periphery of the head;

a bushing with a flange and a shank extending longitudinally from the flange, the flange extending laterally from the shank to an outer periphery of the flange, and with a through-hole in the flange and the bushing shank into which the pin shank is inserted; and

a water-tight seal member on the pin shank adjacent to the head for compression between the pin head and the flange,

wherein a stop is formed on the pin head to keep a predetermined compressed thickness of the seal member when the pin shank is inserted into the through-hole and presses the seal member between the pin head and the flange, wherein the pin head is a plate with circular portions having a diameter smaller than the diameter of the bushing flange, the stop comprises plate portions extending outwardlylaterally outward from the circular portions of the

pin head, and an outer wall is formed at the outer periphery of the bushing flange and is disposed to engage the stop plate portions when the seal member is compressed between the pin head and the flange, and the height of the outer wall is predetermined to provide a predetermined compressed thickness of the seal member.

- 3. (original) A clip according to claim 2, wherein the flange has a recess surrounded by the outer wall for receiving the seal member.
- 4. (previously presented) A clip according to claim 3, wherein a gap is formed between the outer periphery of the pin head and the outer wall of the bushing flange, except where the stop plate portions are located, for insertion of a tool for separating the pin head from the flange.
- 5. (currently amended) A clip according to claim—12, wherein the pin shank and the bushing shank have cooperable parts that cause the bushing shank to expand outwardly at an expanded-diameter-connection position when the pin shank is inserted substantially completely into the bushing shank for connecting a member and a body having aligned holes through which the shanks are inserted.
- 6. (original) A clip according to claim 5, wherein the pin shank and the bushing shank have cooperable parts

that connect the shanks in a non-expanded-diameter-connection position in which the bushing shank is not expanded when the pin shank is inserted partially into the bushing shank.

7. (previously presented) A clip according to claim 6, further comprising a second seal member on the bushing shank adjacent to the flange for providing a water-tight seal between the flange and a panel member having a hole into which the bushing shank is inserted, wherein the flange has a recess in which the second seal member is received and that has an outer wall for engaging the panel member and limiting the compression of the second seal member.

Claims 8-14 (cancelled)
